NERULIN

Composition
- Natural hydro soluble extract of Curcuma Longa

Characteristics
Respiratory pathologies are recurring problems in horses and they require the application of appropriate treatment. In parallel with causal therapy, natural products such as Nebulin may be used to regulate immune functions and the mechanism for the elimination of bronchial secretions.

Indications
Nebulin is specially recommended for horses living in a dusty environment and who are coughing. During violent effort, Nebulin reduces the incidence of pulmonary haemorrhages. It is also recommended in order to improve the respiratory comfort of young athletic horses whose respiratory tracts are regularly clogged and which present performance difficulties.

Dosage and administration
Dilute the Nebulin powder in 40ml of physiological fluid (Unidose capsule NaCl 0,9%)
Shake well.
Withdraw 6ml of reconstituted solution. Introduce the 6ml in the cup of the aerosol, apply aerosol treatment for 20 minutes.
Recommendations for use:
For maintenance of respiratory function: 3 days of aerosol treatment, morning and evening, during the preparation and after competition.
In association with etiological treatment: 2 x 3 days of aerosol treatment morning and evening.
