

PREQUINE®

Get ready for the new season...

PREQUINEMOVE®

25MG SODIUM HYALURONATE IN A 5ML SYRINGE.

PREQUINEMOVE® is a sterile 1% sodium hyaluronate solution obtained from *Streptococcus zooepidemicus* by fermentation processes and subsequent purification. It is characterized by its viscoelasticity, hygroscopicity and lubricating properties.

Intra-articular injection of PREQUINEMOVE® improves articular function, thus relieving pain caused by osteoarthritis.

PREQUINEMOVE® improves articular mobility and normalizes diseased synovia.

INDICATIONS:

Pain and limitation of movement as a consequence of degenerative and traumatic changes of

PREQUINE® LYTE C

Complementary feed for horses and ponies.

Prequine® Lyte C is a balanced mix of physiological salts known to be essential to normal body function. Prequine® Lyte C is formulated for quick and efficient replacement of vital electrolytes. It rapidly replaces moisture- and mineral loss during competition, strenuous exercise and transport. Diluted in drinking water, the optimal balance of sodium and potassium in Prequine® Lyte C will rapidly compensate dehydration and mineral loss during training/sport.

Available in 2.000g/4.000g/10.000g buckets.

PREQUINE® ZANABOL

Complementary feed for horses, ponies and camels. Prequine® Zanabol is a highly palatable feed supplement containing Gamma Oryzanol, Creatine and L-carnitine. Gamma Oryzanol is a rice bran oil derivative with two major active components; sterol and ferulic acid. Both components assumedly stimulate the body's endocrine system, resulting in increased fat metabolism and protein synthesis, thus leading to increased lean body mass. Creatine rapidly increases muscle mass. After oral intake, Creatine is metabolised into phosphocreatine, which plays a major role in energy metabolism: phosphocreatine donates its phosphate group to ADP, to rapidly regenerate ATP (ADP + P → ATP). An increase in intracellular phosphocreatine concentrations makes muscle cells less dependent on anaerobic glycolysis, the process in which lactate is produced. L-carnitine, by facilitating energy release from fat, has a positive effect on stamina and resistance to fatigue.

Available in 1.000g/3.000g/10.000g buckets.
