MINERALS + 13 VITAMINS + 4 TRACE ELEMENTS + 4 AMINO ACIDS + 2 "BONUS" INGREDIENTS

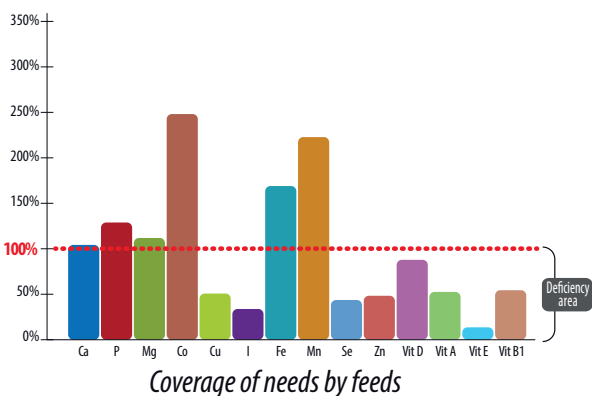

## WHY COMPLEMENT?

Unlike purebred gallopers, trotters are generally fed natural pasture hay, complemented with a combination of cereals and "racing" processed feeds. The quality of natural pasture hay varies greatly depending on soil quality and when the pasture is cut. Particularly, amounts of calcium and magnesium are often low while amounts of cobalt, iron, and manganese often exceed needs. For most trotters, the goal is to make up the difference between greater needs and insufficient amounts of minerals, vitamins, and certain trace elements in hay and cereals by adding processed feeds to daily rations. However, this compensation will only be partial.

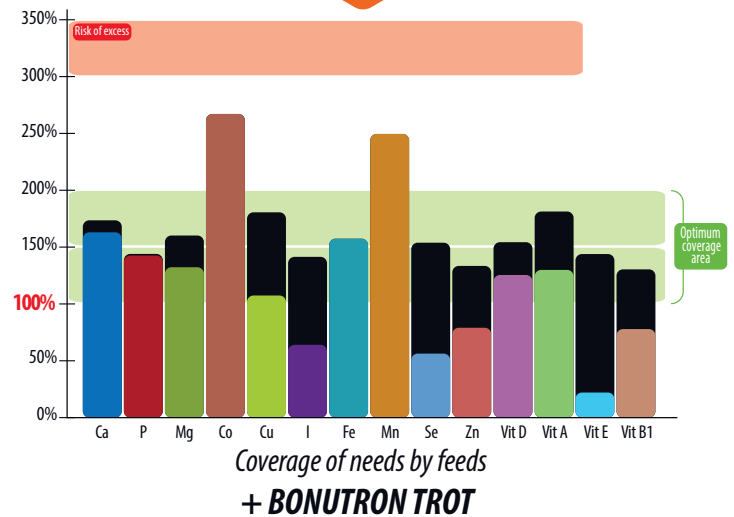

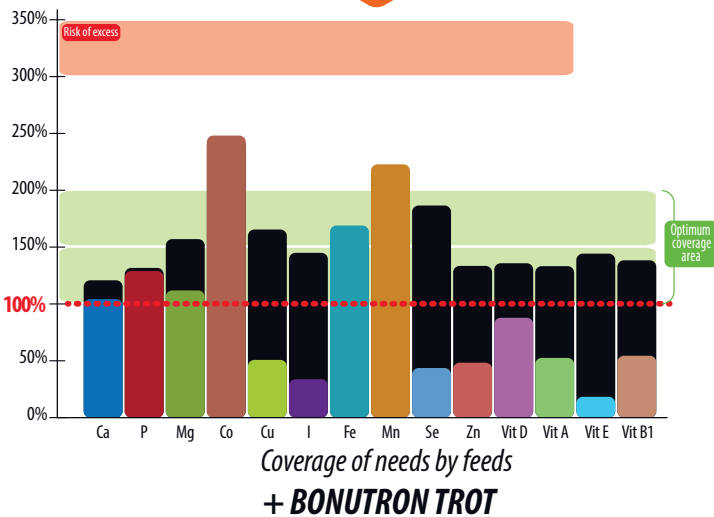

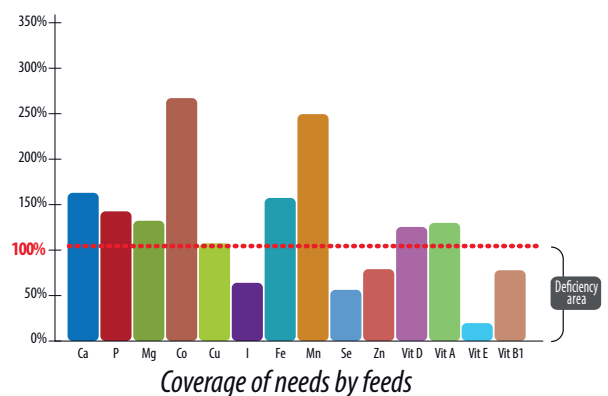

## Example of a trotter in very intensive training

(Needs determined through a combination of the NRC, GfE, and INRA systems, as well as publications by international

## THE ADVANTAGES OF BONUTRON TROT

### • A formula specially made for trotters

- ▶ Specially developed for rations based on natural pasture hay
- ▶ Designed to be adapted to all typical types of rations for trotters (hay + barley/oats mix, with or without processed concentrate)

### • Target: muscle performance

- ▶ Muscular structure: lysine and threonine
  - ▶ Energy usage: L-carnitine
  - ▶ Antioxidants: polyphenol-enriched formula
- ### • Safety in performance
- ▶ Contains a mycotoxin binder
